Why Choose Us?

Swiftsure Milling & Mouldings is a Canadian manufacturer of premium wood products serving high-end residential and commercial markets.

We specialize in producing visually striking, value-added wood solutions through in-house milling, texturing, and finishing. By combining expert craftsmanship with efficient lead times, we help contractors meet demanding schedules while adding value to their projects. Swiftsure delivers consistent quality, dependable turnaround, and elevated results - without compromise.

Customization

Tailored moulding and finishing options for unique project requirements.

Quality

Where high-end craftsmanship meets smart pricing for everyday builds.

Local

Proudly based in British Columbia, serving the local community and beyond.

Our Premium Wood Materials

Western Hemlock

SwiftSure Milling & Mouldings **specializes in producing** premium Western Hemlock products sourced and harvested in British Columbia.

Western Hemlock is renewable, light in weight, and beautifully uniform in colour - making it an ideal choice for soffit and other protected applications.

Based in British Columbia, we're surrounded by the landscapes that inspire our finishes and textures. Our locally sourced Hemlock and refined, select colour options reflect the rich, natural tones of the Pacific Northwest.

Western Red Cedar

Swiftsure provides high-quality Western Red Cedar for its natural durability, warm grain, and classic West Coast character - an excellent choice for exterior projects where performance and appearance both matter.

All mouldings are profiled at our facility before being finished in-house, ensuring consistent quality and tight lead times.

If you're working to a specific budget or look, we also carry more economical cedar options that still deliver great results - helping you match your vision, your palate, and your price point.

Colour Options

Pre-finished soffit + exterior

22 QuillMist

24 Saffran Sand

51 Nordic Drift

4 Tarnshore Patina

27 Kolnatt

29 DriftLine Oak

39 Glacier Shale

Unique Wood Textures

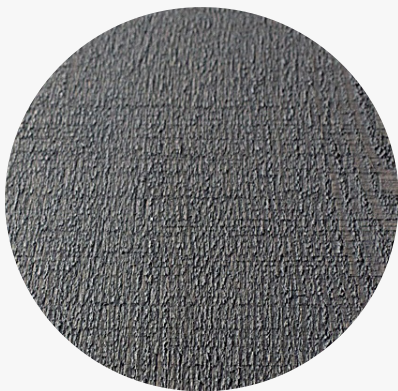

Wire Brushing

This method remove softer wood fibers, exposing the grain and creating a textured surface. It enhances the natural patterns of the wood and is often used to achieve a rustic or weathered look.

Charred

Inspired by the Japanese technique of Shou Sugi Ban, charring wood involves burning the surface to create a unique texture and darkened appearance.

Re-Sawn Face

This technique highlights the raw, rustic appeal of wood with saw marks left intact. The surface retains its rugged, tactile quality, adding authentic charm to any design.

Combface

This technique uses specialized tools to create linear grooves or comb-like patterns on the wood surface. It's a great way to add depth and character, making the wood stand out in design applications.

Wood Finishing

- **Priming** High-quality priming options available to ensure the best adhesion and protection.
- **Sansin** Premium staining and finishing solutions to enhance beauty and durability.
- **Others** Various additional finishing options tailored to your project needs.
